高舒适，低能耗：**BE** 的中国大量性住宅设计案例

贾倍思
香港大学建筑系副教授

BE香港建筑设计董事，经理

1. Good building 优秀建筑
2. Flexible building 灵活性
3. Low energy 节能
4. Economy   经济

1. Good building优秀建筑

- Locality (Maximize the use of existing quality of the place)
- 因地制宜（最大可能利用基地的自然条件和资源）
- Better than the local buildings远胜于当地已有建筑
- High quality in construction and craftsmanship
- 精良的建造和工艺水平
- Beauty of the architecture (form, proportion, lighting…)
- 建筑美感（形式，比例，光线）

- **Public Space, Façade, Staircase /core, Structure,**
- **公共空间，外墙系统，楼梯/核心空间，结构**

2. Flexibility灵活性

Structural Neutrality 独立结构
Support and Infill are separated
支撑体和填充系统的分离
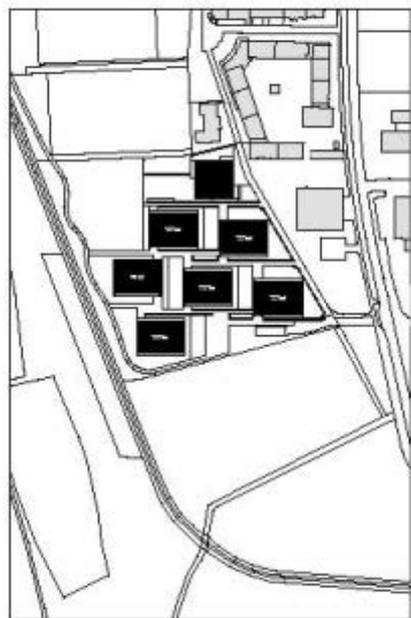

总平面图之二

0   30   50   100 m
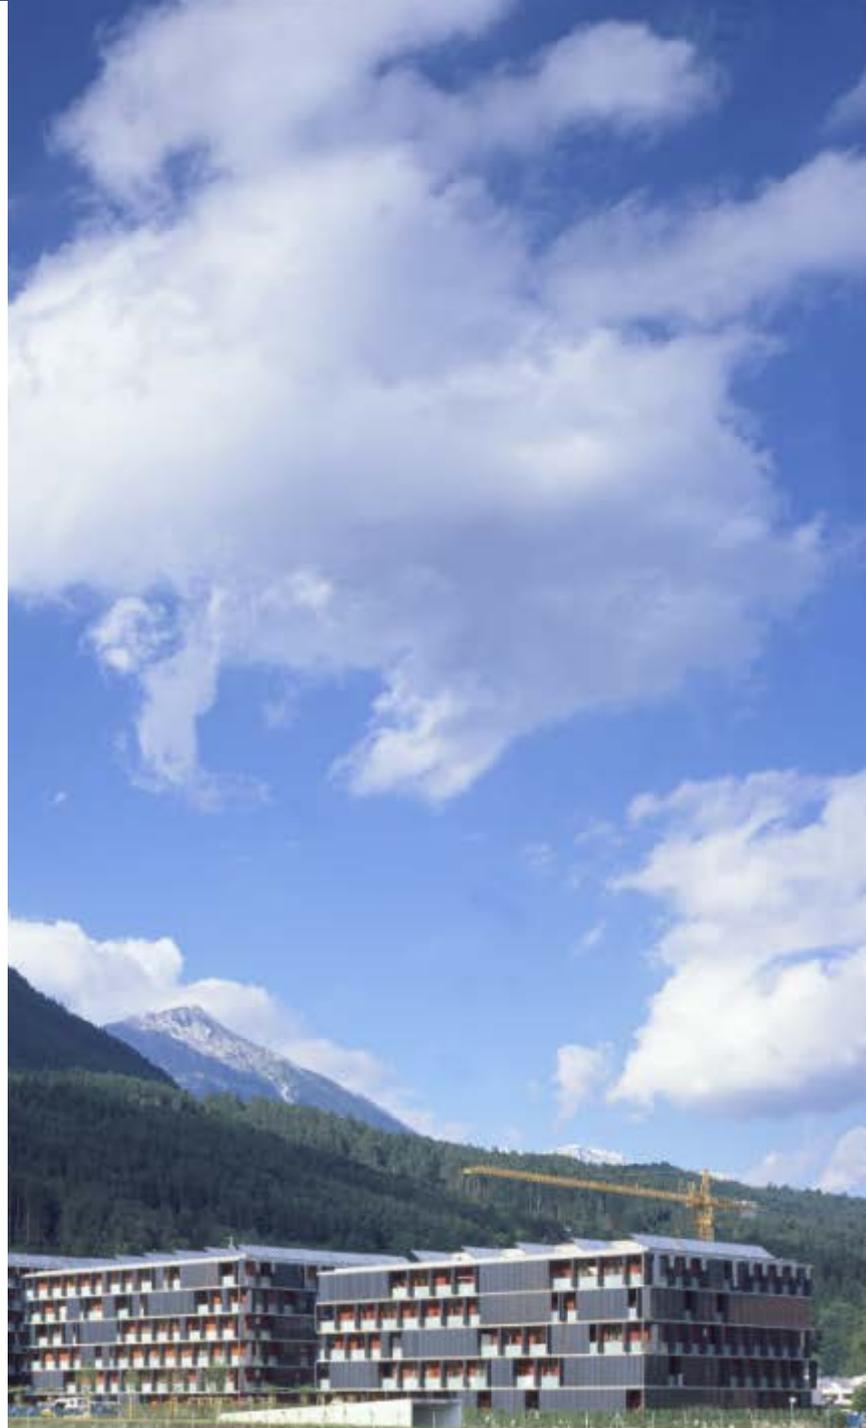

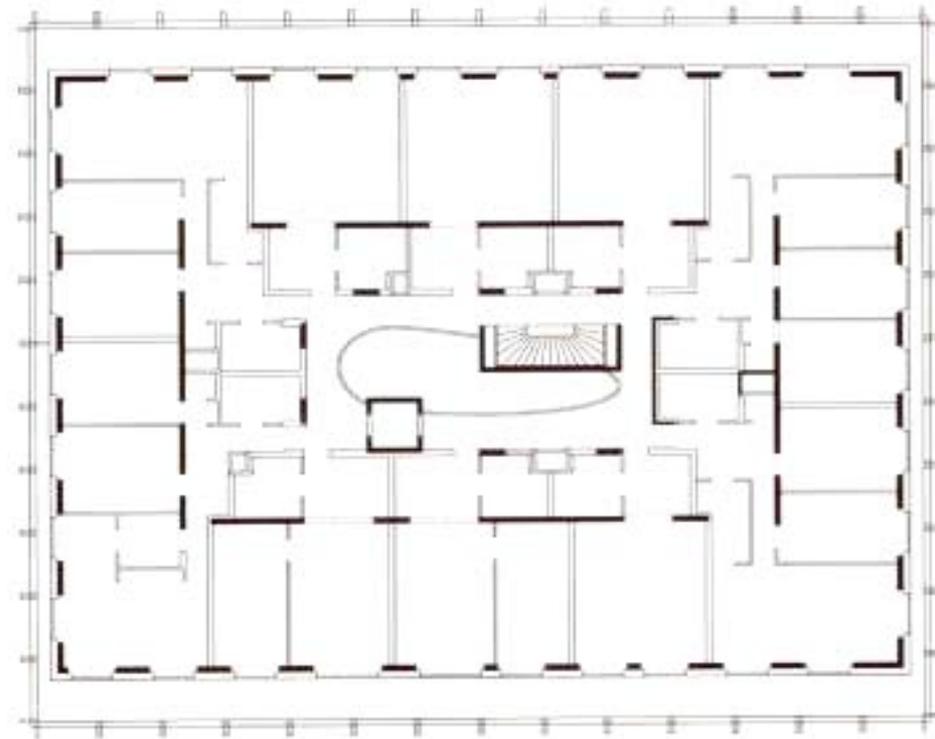

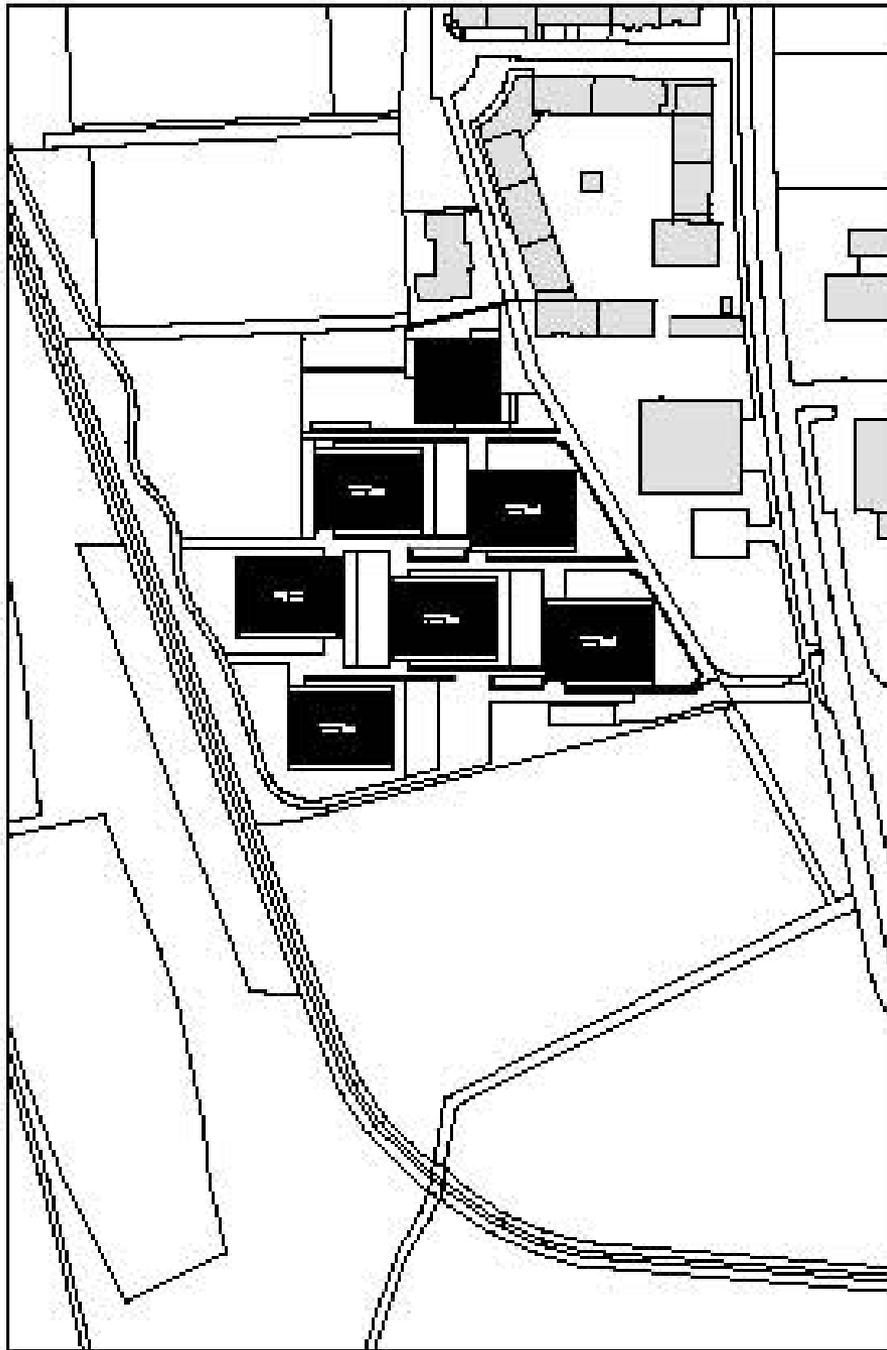

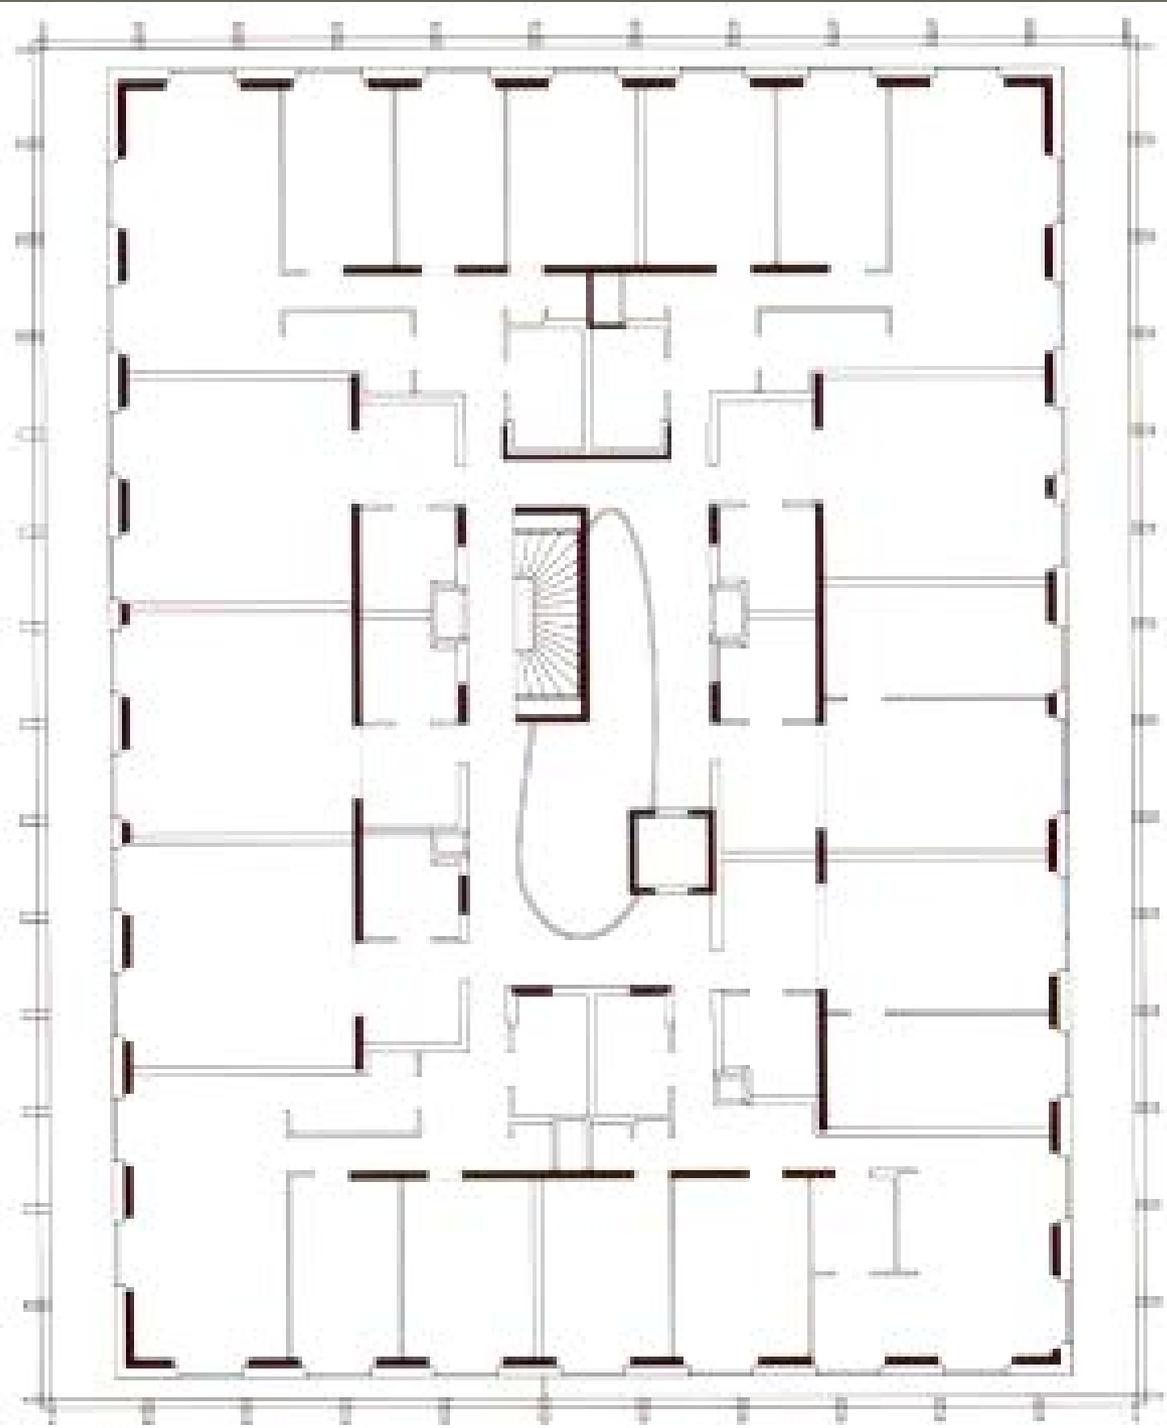

3. Low energy节能

Architectural solutions can safe 70% energy
建筑设计策略能节能70%的能源

If doing well, there is no need of heating!
理想的模型，建筑可达到无需额外的供热系统。

heating   cooling

The BE Tool (BE 软件) - The 'DCC (digital content creation) Assistant(DCC设计辅助软件）

开发目的：为建筑节能设计提供一种简单而有效的工具

使用步骤：
步骤1： 输入所需信息。包括基地，气候，目标，内部功能需求，窗户尺寸等基础的一手数据；
步骤2：适宜的被动式技术引入。包括朝向，窗墙比，遮阳系统，节能材料等一系列可使用的被动设计策略，展示各自的有效性；
步骤3：计算出被动技术带来的能耗效果，与节能及舒适的目标进行对比；
步骤4：主动技术的使用。包括建筑设备的选择，供暖供热系统的选择等一系列可使用的技术设备，展示各自的有效性；
步骤5：小结。提出项目预测投资成本报告，包括设备成本，后期维修成本等。同时提供已选择的技术设备的详细分析报告。

Pilot Housing Project
Shanghai

- 4 main structural walls
- Prefabricated
- All partition walls are removable and changeable
- Stair can be added
- All technical elements contained in the central zone
- External sun shading are usable as balconies or as terraces
- Buildings are modular and additive

Pilot Housing Project
Shanghai
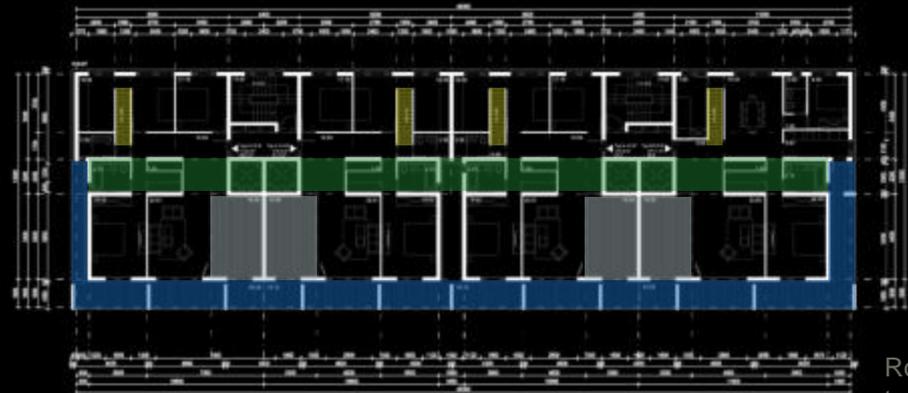

Roof floor with terrace

standard floor

4. Economy经济

- Simple shape 简单形体
- Support and public space 支撑体系和公共空间
- Maximize the use of existing resources of the place
- 最大可能的利用当地的自然资源和条件
- Don't try anything we don't know
- 不尝试使用我们不了解的技术
